

# Stem Cutter Instruction

This heavy duty tool easily cuts wire stems up to 1/2 inch thick. The table top design requires less force, and frees one hand to hold stems while the other press down to cut. Features a cushioned handle and sturdy base.

## How to Use:

1. Lift handle.
2. Insert stem to desired cut point.
3. Hold stem in position.  
Hint: Holding the stem close to the blade will help ensure a clean cut.
4. Push handle down in a swift firm motion to cut.

Tip: The Stem Cutter is designed for stems up to 1/2 inch thick. Do not force larger stems into the blade opening. The type of wire in artificial stems varies widely. The Stem Cutter works best with stems containing less than 4 mild-steel wires approximately 1/16 inch (1.5mm) diameter each.

**CAUTION:** Sharp blade. Contact may result in injury. Keep fingers out of cutting blades. Handle with care. Keep out of reach of children.
